

TESTS

HIP FLEXIBILITY

Stand facing this wall with your toes touching the wall. Now walk your feet as wide as possible. Measure this distance between your heels at the widest point possible. You must keep your toes and stomach in contact with the wall at all times and can only use upper body support for assistance getting in and out of the position.

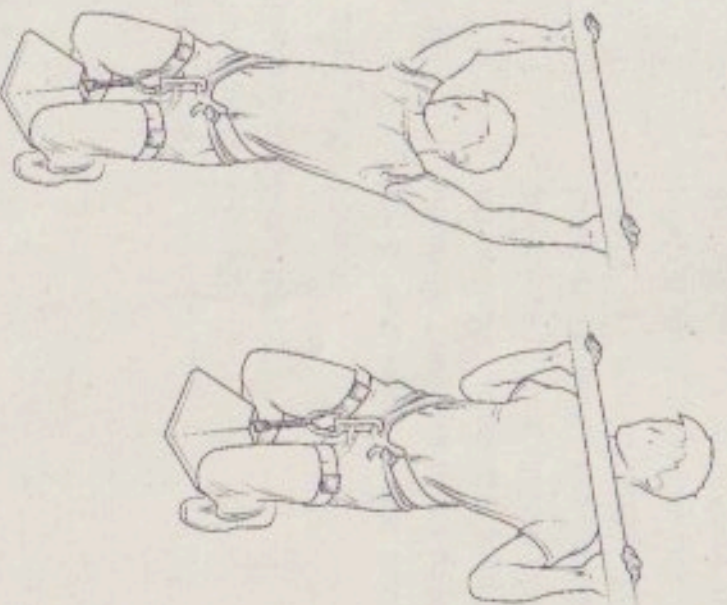

Record:

Distance between your heels in cm.

MAX WEIGHTED PULLUPS

Complete 2 pull ups using the maximum weight you can. Add weight to your body using a harness or sling. It may take you several sets to find a max weight, so remember to rest for 3 min between each attempt. 2 pull ups must be completed from nearly straight arms to chin at bar in a controlled manner without any movement in your lower body. Hands should be at around shoulder width with palms facing away.

Record:

Total load (kg) (Total load refers to the weight in kg added or removed from your body in ADDITION to body mass in kg).
