

Lattice Training Plan – 27th of November 2023 to 19th of February 2024

"Base phase: Your plan aims to build on your last block by bringing your power endurance training to the forefront now that you have seen such great gains in finger strength. We will do this by wrking pure power endruance in one climbing session and one FB session while we use one climbing session to build your aerobic base and the last one to maintain your strength and power in bouldering. We will also keep one more maximal FB session to maintain your excellent gains. Your conditioning will diversify your pull strength to a wide position while working on oevrall shoulder stability at the same time. "
